DETAILED ACTION

Election/Restrictions

1. This restriction requirement reflects the preliminary amendment filed 23 October 2002 which was filed in response to a telephonic restriction requirement on 16 September 2002.
2. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 1. Claims 1, 3, and 5, drawn to a method of identifying cells, tissues, or nuclei by comparison of DNA methylation patterns, classified in class 435, subclass 6.
 2. Claim 4, drawn to a program that compares DNA methylation patterns, classified in class 702, subclass 19.

The inventions are distinct, each from the other because of the following reasons:

3. Inventions 1 and 2 are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method of Group 1 could be done manually.
4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
5. During a telephone conversation with Jean Fordis on 16 September 2002 a provisional election was made without traverse to prosecute the invention of Group 1, claims 1, 3, and newly filed claim 5. Affirmation of this election must be made by applicant in replying to this Office

action. Claim 4 is withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

7. Applicant's reiteration of their oral election of Group 1 in Paper No. 7, a preliminary amendment filed 23 October 2002 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Priority

8. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

9. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

10. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

11. Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP

Art Unit: 1631

§ 2172.01. The omitted step is: a step of assessing the development of a certain type of cell, tissue, or nucleus.

Claim Rejections - 35 USC § 102

12. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

13. Claims 1, 3, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Duffy.

The claims are drawn to a method of comparison of DNA methylation patterns of different cells. In some embodiments the comparison serves to identify types of cells, the methylation patterns are in gene regions, and the developmental state of the cell is determined.

Duffy shows in the abstract a method of comparison of DNA methylation patterns of cells. In some embodiments the methylation pattern is at a coding or regulatory region of a gene. In some embodiments the method is used as a diagnostic test to determine cancerous cell types. Duffy provides guidance in column 11 to use cells that are cancer cells, and to compare such cells with normal type cells from analogous tissues. Duffy provides working examples of their method in columns 21-28.

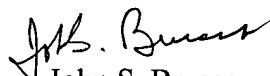

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Brusca whose telephone number is 703 308-4231. The examiner can normally be reached on M-F 8:30-5:00.
